**Modern Supramolecular Gold Chemistry** Antonio Laguna 2008-09-26 Filling a gap in our systematic knowledge of gold, this monograph covers the fundamental aspects, while also considering new applications of gold compounds in catalysis, as nanoparticles, and their potential application as luminescent compounds. Written by an eminent team of authors from academia, the book analyzes the current status of gold chemistry, its special characteristics, oxidation states and main type of complexes, before going on to look at the synthesis of supramolecular aggregates due to the formation of gold-gold, gold-metal interactions or other secondary bonds. Final sections deal with LEDs, solvoluminescent and electroluminescent materials, liquid crystals and catalysis. While of interest to advanced chemistry students, this book is also useful for researchers interested in the chemistry of gold and its applications, as well as those involved in metal-metal interactions, heteronuclear chemistry or in the optical properties of coordination compounds.

**Contemporary Legend** Gillian Bennett 2013-09-05 First published in 1996. For most of the time since the Grimm brothers first contrasted the fairy tale (Märchen) and the legend (Sage), the former has enjoyed the greater reputation among folklorists. Only in recent years, and with the work of such scholars as Gillian Bennett and Paul Smith, has it been recognized that—both as art and as news—the legend is now central to contemporary culture in a way that the Märchen no longer is. The present book is the first collection of essays on legend to appear in English since 1971. Nevertheless, its publication consolidates a gradual shift which has taken place over the last two decades, in which English-language scholarship has taken the lead in the study of certain kinds of legends—variously dubbed modern horror legends, urban legends, urban myths or, here, contemporary legends.
